- [Selection criteria](#)
- [NSERC policies](#)

How NSERC uses external reviews

NSERC depends on high-quality reports by external reviewers to decide which applications to fund. Your review will be incorporated into NSERC's internal assessment. NSERC shares your review with the applicant, while keeping your name and any identifying information confidential. Under Canada's privacy laws, your review of an application is considered personal information belonging to the applicant.

Conflict of interest and confidentiality

You must be in compliance with the [Conflict of Interest and Confidentiality Agreement for Review Committee Members, External Reviewers, and Observers](#), or decline to participate in the review process. If you cannot act as an external reviewer for any reason, contact NSERC as soon as possible.

How to review a grant application

- Evaluate the application and **provide comments on each of the Selection criteria**. Provide a balanced review of the strengths and weaknesses of the application, with comments that are:
 - **Fair:** Impartial, respectful and appropriate, and
 - **Informative:** Clear, detailed, constructive and well justified
- **Base your review solely on the selection criteria and on the content of the application**, without consulting web sites (other than NSERC's) or seeking opinions from other individuals. However, you may refer to related published work to make a point.

- **Provide an unbiased review.** You may have biases based on your preferred school of thought, the discipline in which you work, or your orientation toward fundamental versus applied research. You might also be influenced by the size or reputation of the applicant's institution, or by the applicant's age, gender or other personal characteristics. You should ensure that none of these conscious or unconscious biases influence your review. NSERC recommends that you complete this [online training module on unconscious bias](#).
- You must store all confidential review documentation securely to prevent unauthorized access, and securely destroy it once it is no longer required.

About Alliance grants

Alliance grants encourage university researchers to collaborate with partner organizations, which can be from the private, public or not-for-profit sectors. These grants support research projects led by strong, complementary, collaborative teams that will generate new knowledge and accelerate the application of research results to create benefits for Canada.

Research supported by Alliance grants will:

- generate new knowledge and/or technology to address complex challenges
- create economic, social and/or environmental benefits
- contribute to Canada's long-term competitiveness
- support public policy
- train new researchers in areas that are important to Canada and to the partner organizations
- draw on diverse perspectives and skill sets to accelerate the translation and application of research results

Evaluation criteria

In making its funding decision on the application, NSERC gives equal weight to each of the four selection criteria detailed below. In your review of the application, comment in detail on how well it meets each sub-criterion, considering the review questions listed under each. Justify your assessment by referring to the information provided in the application. Please note that applicants' proposals will vary in length; the allowed length of an Alliance proposal is determined by NSERC and is proportional to the amount of funding requested.

1. RELEVANCE AND OUTCOMES

1.1. Significance of the intended outcomes and of the economic, social and/or environmental benefits for Canada

- How well does the research address the knowledge gaps to develop new and innovative policies, standards, products, services, processes or technologies in Canada? What is the extent of these knowledge gaps (partner-specific, local, regional, national, or international)?
- To what extent (not identified, minimal, high, etc.) will the anticipated outcomes have an impact (economic, societal, environmental) for Canadians?

1.2. Originality of the research to address the topic and the potential for generating new scientific knowledge

- Does the application propose original research and will new scientific knowledge be generated? This may be assessed through a literature review, awareness of the state-of-the-art, position within the state-of-the-art, proposed advancement in the field, promising new direction for an existing challenge, development of new concepts and methods, etc.

1.3. Extent to which the strategy to apply the research results is likely to achieve the intended outcomes

- Are there plans for technology transfer, policy development and/or knowledge translation, and, if so, how strong are these plans?
- Is there a plan to involve the partner organization(s) in the exploitation of the anticipated results in order to achieve the intended outcomes, and, if so, how strong is this plan?
- Is the strategy to apply the research results well aligned with the core activities or mandate of the partner organization(s)?
- Is the strategy to apply the research results well aligned with the capacity of the partner organization(s) to exploit the research results?

2. PARTNERSHIP

2.1. Appropriateness of the partnership to achieve the intended outcomes; leveraging of different types of partner organizations and the integration of their unique perspectives and knowledge in the project, as appropriate

- Are the project's objectives and anticipated outcomes well aligned with the activities and mandate of the partner organization(s)?
- Are all partner organizations relevant to achieving the project's outcomes?
- Is there a partner organization missing or lacking in order to achieve the stated outcomes?
- Taking into account the types of partner organizations involved, are their mandates and activities complementary (e.g., value-chain relationship, multiple sectors)?

- Does the partner organizations' combined involvement add value to the project? Is the whole partnership greater than the sum of its parts?
- 2.2. Clarity of each partner organization's role in the collaboration with respect to defining the challenge, co-designing and implementing the research, and using the results to achieve the desired outcomes**
- Is each partner organization's role and contribution to the research activities clear throughout the project's stages (co-design, progress monitoring and oversight, co-supervision, planning and supporting of field work, provision of services, etc.)?
 - What is the importance of each partner organization's role to the project's success?
 - Is the plan for the translation of the anticipated results into outcomes clear? What is the partner organization(s)' capacity to achieve the desired outcomes?
- 2.3. Appropriateness of the level of cash and in-kind contributions from each partner organization**
- Will each partner organization make a contribution (cash and/or in-kind) to the project? Consider the in-kind contributions as part of the proposal evaluation.
 - To what extent do the contributions of each partner organization support the achievement of the project's objectives and/or impacts?
 - Are the contributions made commensurate with the anticipated benefits for the partner organization(s)?
- 3. QUALITY OF THE PROPOSAL**
- 3.1. Clarity of the objectives and deliverables; appropriateness of the scope and size of planned activities to achieve the expected outcomes; justification for the planned expenditures**
- Are the objectives and deliverables of the project clear? Are the scope, timetable, milestones, methodology and experimental design appropriate to achieve the objectives and expected outcomes?
 - Is the project scientifically and technically feasible?
 - Are the planned expenditures (including any requested equipment) well justified, and how relevant are they to the project?
- 3.2. Appropriateness of the identified indicators and methods for monitoring progress during the project and for assessing outcomes afterwards**
- Are there indicators and methods to monitor activities, outputs and outcomes? How relevant are they?
 - Are the partner organization(s) involved in monitoring progress and assessing outcomes?

- Are there any knowledge- and/or technology-transfer activities in the project? How appropriate are the proposed indicators and methods to monitor such activities?

3.3. Appropriateness of academic researchers' expertise, and that found within the partner organizations, both for carrying out the planned research activities and in mentoring trainees

- How well aligned is the team members' combined educational and/or professional background and expertise with the project?
- Are the team members' recent research contributions (articles, patents, conferences, consulting, etc.) relevant to the project?
- Have the team members shown that they are familiar with and/or have experience with relevant scientific literature and techniques?
- Are there planned collaborations?
- Do the applicants have experience in working with the user sector?
- Does the Principal Investigator have a track record of managing projects of a similar type and size?
- What is the applicants' and co-applicants' record in supervising trainees? Will such record enable them to mentor the number and level of trainees proposed?

Note: Applicants are invited to explain and give start and end dates in their CVs of any significant delays in the past six years, such as parental leave, bereavement, illness or extraordinary administrative duties, of the applicant or of their students or research personnel. Be sensitive to the impact of these circumstances on the researcher's productivity and contributions to training.

4. TRAINING

4.1. Opportunities for enriched training experiences for research trainees (undergraduates, graduates, postdoctoral fellows) to develop relevant research skills as well as professional skills such as leadership, communication, collaboration and entrepreneurship

- Are the number and academic level of the trainees appropriate to meet the project's objectives?
- Are there opportunities for the trainees to develop research and technical skills?
- Does the application detail the nature and the extent of trainees' interactions with partner organization(s) (e.g., internships)? Do these interactions provide opportunities for enriched training above and beyond what the trainees receive through their academic experiences?
- Are there any other opportunities for enriched training experiences in the academic environment (e.g., conferences, international collaborations, mentorship, multidisciplinary research environment, etc.)?
- Are there any specific opportunities for professional skills development?

NSERC policies

Allegations of policy breaches

If your review leads to concern about possible policy breaches, report any allegation to NSERC program staff. Allegations of policy breaches must be treated separately from the peer review process, as described in the [Tri-Agency Framework: Responsible Conduct of Research](#). Your external review report should address only the application and selection criteria and should not mention any breach concerns.

Collection and use of personal information

The information you provide is collected in accordance with the laws governing NSERC. This information is stored in a series of NSERC data banks, as described in [Info Source](#). Details about the use and disclosure of this information are described in [Use and Disclosure of Personal Information Provided to NSERC](#). The information is used in accordance with Canada's privacy and access to information laws.
